

# Waste Water Handling...

*Do it the cool way...*

## **MDDR:**

This is the new line of LJM-mixers manufactured completely in stainless steel. It can be used in smaller tanks where you need a very good mixing, or in aggressive media, for example in industry or waste water plants where the PH-value is fairly high/low.

The mixer can, as with our standard cast iron MDD-mixer, be easily installed on a 60 or 80 mm square mast or as fixed mixer in the bottom of the tank.

The optimum form of the propeller gives a very concentrated streaming and can reach a long distance. The result is a very effective mixing with low energy consumption.

The MDDR mixer can be supplied in the same size as the MDD – from 1,1 to 3,0 kW – and is also fitted with 2-bladed propeller along with temperature and leakage control.

The motor bracket and trap clamp are also in stainless steel.
