

Waste Water Handling

Do it the cool way...

OMDR:

This is a complete new type of agitator from LJM manufactured entirely from stainless steel.

It can be used in larger tanks where you need to achieve good mixing. This is achieved with a larger diameter blade running at a slower speed.

The mixer is very good in aggressive media, for example in industry or wastewater plant where the PH-value is fairly high/low.

Fitted with an 8-pole motor and direct drive, giving a propeller speed of 700-750 RPM. It is fitted with temperature and leakage control both in the motor and oil chamber.

OMDR is equipped with motor bracket and trap clamp, as all our other mixers, and can easily be installed on an 80 or 100 mm. square mast.

The OMDR mixer can be supplied in 1,5 and 2,5 kW – later also 5,5 kW – and is fitted with 2-bladed propeller in aluminium-bronze. The form of the propeller gives an optimum mixing with low energy consumption.
