

Waste water handling...

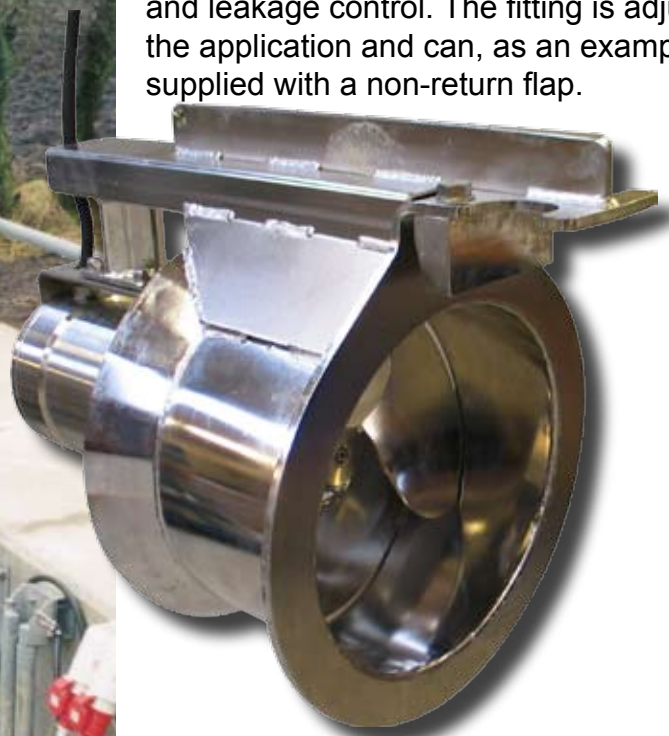

Do it the cool way...

RCDR:

RCDR the re-circulation pump is especially suitable for pumping of large quantity of water at a comparatively small head. The re-circulation-pump is used in the cases where there is a need for re-circulation as for example between AN- and DN-tanks.

The RCDR is available with an motor size from 1,1 – 3,0 kW. The re-circulation pump is directly driven and is equipped with sensor and leakage control. The fitting is adjusted to the application and can, as an example, be supplied with a non-return flap.
